TIPS FOR ACCURATE MEASUREMENT

- Measure at the same time of day every day
(Within 1 hour after getting up and before bed-time are recommended)
- No bathing, drinking alcohol or caffeine, smoking, exercising or eating 30 minutes before taking a measurement
- Use appropriate arm cuff of small, medium, large & wide size

CORRECT POSTURE FOR UPPER ARM BLOOD PRESSURE MEASUREMENT

CORRECT POSTURE FOR WRIST BLOOD PRESSURE MEASUREMENT

- Place the wrist cuff over wrist.
- Your palm should face upward.
- Wrap the wrist cuff around your wrist.
- Sit on chair with your feet flat on the floor.
- Sit upright with your back straight.
- The cuff should be at the same level as your heart.

Relax your wrist and hand. Do not bend your wrist back, clench your fist, or bend your wrist forward.

Note: make sure that the wrist cuff does not cover the protruding part of the wrist bone (ulna) on the outside of the wrist.

HOW TO USE NEBULIZER

Caution:

Do not tilt the nebulizer kit at an angle of greater than 45 degrees in all directions. Medication may flow into the mouth or it may result in not nebulizing effectively.

IMPORTANCE OF PARTICLE SIZE

ERS Recommendation

European Respiratory Society recommends particle size (MMAD) as the most important parameter for selecting a nebulizer

Why is MMAD important

Nebulizer creates an aerosol with a range of particle sizes and MMAD is the median diameter of the aerosol particle, which ensures efficient delivery of medication.

OMRON NEBULIZER'S ARE ALWAYS HAVING THE APPROPRIATE PARTICLE SIZE
